Thanks, Shaun. You certainly have some interesting cases out there!

And appreciate the heads up on the Aclima/Google mobile monitoring. First I had heard of this-- another example of the revolution coming our way in measurement technologies open to a wider non-governmental world. This is going to challenge our thinking at EPA in the next decade in many ways!

Weekend Report from R8

Meeting with Ute Tribe --

This week, I met with Uintah and Ouray Business Committee to discuss oil and gas development on the reservation and the winter ozone challenges we are seeing in the Unita Basin. One key proposal for addressing ozone that was discussed was for EPA, in coordination with the Tribe, to develop a reservation-specific rule (FIP). We had very good dialog on this option, and in the end, the Chair and Council Members supported having our respective staffs work together to further explore this option. A very positive outcome! Additionally, although the Tribe expressed frustrations with the County, State, and BLM, the Business Committee agreed that working with all of these entities in a basin-wide approach was the appropriate course. In that vein, we also met with the County Commissioners and the BIA, and have upcoming meetings scheduled with the new UT DEQ director, and BLM.

Termination of Wind River Grants -- This week, we will be sending a letter to both Eastern Shoshone and N.Arapahoe Tribes informing them we have terminated their 2015 grants.

This action comes in response to the N. Arapahoe's decision to terminate the Wind River Joint Business Council last Fall, which is the entity to which the grant was granted. Despite numerous communications, meetings and consultations encouraging the Tribes to establish an alternative mechanism to administer the grants, the Tribes have thus far been unsuccessful in agreeing on such a mechanism. We took the action of suspending the grants in the Spring, and gave them notice that termination was the next step if progress was not made, so the Tribes will not be surprised by our letter. We have coordinated the effort with other federal agencies, most notably BIA, which provides the Tribes their largest amount of funds. Because the termination action potentially relates to the TAS litigation, we will notify the 10th Circuit of our action.

Blanche Park (CO) Farm Pond Exemption -- USACE Sacramento District received a request from the Grand Mesa Water Conservancy District for an agricultural exemption from 404 permit requirements in connection with the Conservancy District's proposal to rehabilitate and put back into use the Blanche Park reservoir on the Grand Mesa. We've

Aclima/Google Mobile Air Monitoring -- EPA has a Cooperative Research and Development Agreement with Aclima Inc. to improve data quality from small-scale sensors and advance stationary and vehicular sensing platforms. Through this CRADA, EPA supported a Denver pilot study by Aclima and Google that took place last summer during the DISCOVER-AQ study. Aclima used Google's Street View cars to test a suite of mobile air monitoring equipment as the cars moved throughout the city. EPA scientists advised on the design of the monitoring system and the study, and provided opportunities through DISCOVER-AQ to access additional ground measurement tools in Denver at that time.
